Full-Stack Developer Technical Test

Daniel Anantadhirya A. L.

Introduction

Dexattendance, short for Dexa Attendance, is an employee attendance management system developed as part of the Dexa Group technical assessment.

GitHub Link: https://github.com/Anantadhirya/dexattendance

Tech Stack

- Programming Language: TypeScript
- Frontend: Next.js (React.js framework)
- Backend: NestJS
- Database: MySQL

Deployment

The deployment setup for this technical assessment prioritizes the availability of free hosting plans. Therefore, the infrastructure choices do not necessarily reflect the deployment architecture I would choose for a production environment with an allocated budget.

Please note that **the demo application may experience slower response times due to the resource limitations of these free-tier services**.

Live Demo: https://dexattendance.vercel.app/

Component	Service	Plan
Frontend (Next.js)	Vercel	Hobby
Backend (NestJS)	Vercel	Hobby
Database (MySQL)	Aiven	Free Tier
CDN / Image Storage	Cloudinary	Free

Demo

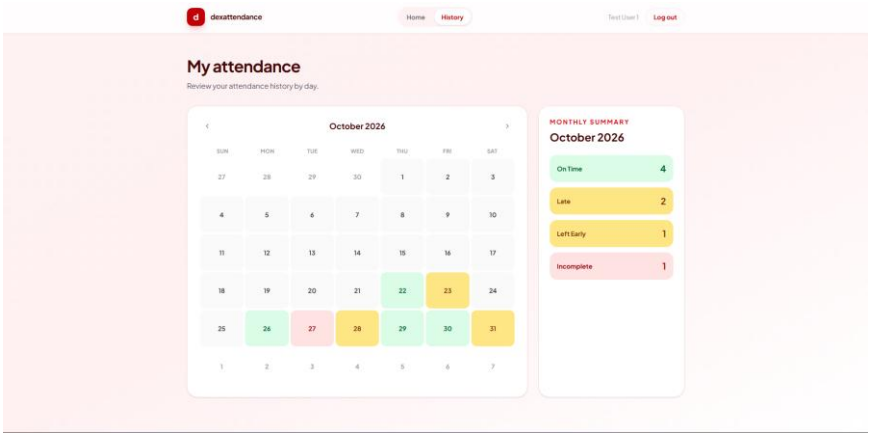

Credentials:

Role	Email	Password
Employee	testuser1@gmail.com	Testing@123
Admin	admin@gmail.com	Testing@123

In addition to the regular usage, I have prepared dummy data on the live demo for the following scenarios to help demonstrate the application's functionality:

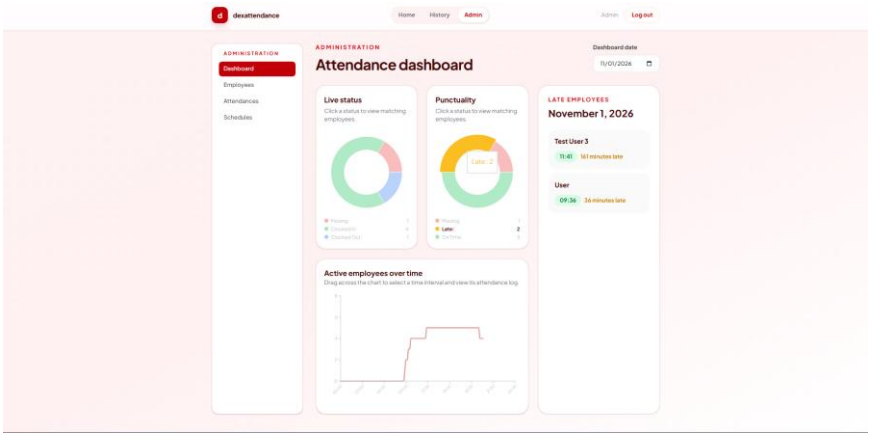

- Test User 1 – October 2026 Attendance History

  Explore various attendance scenarios with the interactive calendar (early, late, etc).

- Admin – November 1st, 2026 Dashboard

  View currently active employees and their attendance with the interactive dashboard

- Admin – October 31st, 2026 Dashboard

  Select a previous date to see how the dashboard displays historical attendance data
